

Alpha

The Fellert Standard System is a seamless ceiling with practically limitless possibilities when it comes to design. Since all of Fellert Acoustic Systems are independent of external conditions, the Alpha could be installed closed mounted to the existing backing horizontally as well as vertically, or, suspended down to optional height with equal extraordinary acoustic qualities.

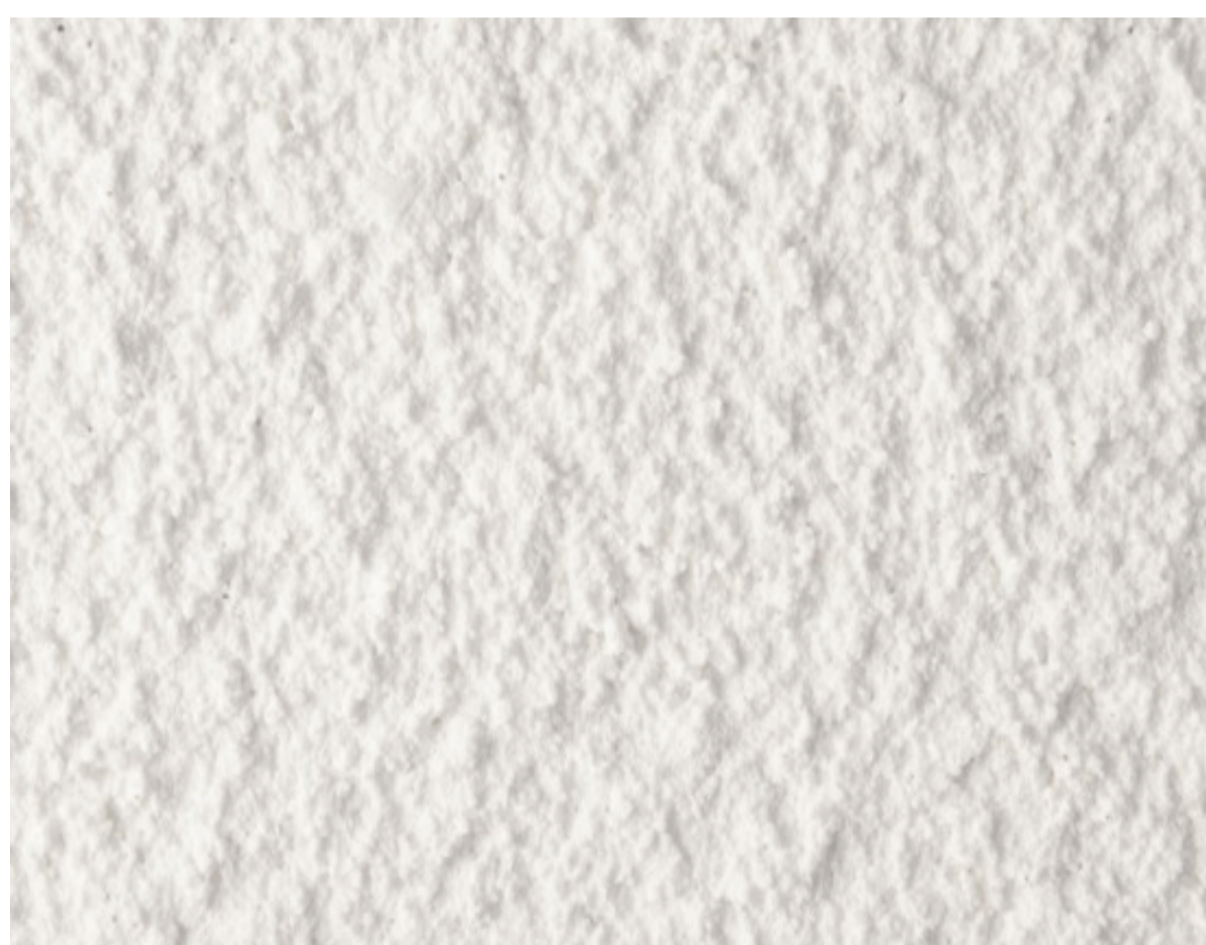

Moreover, the system can be shaped to vaults, cross vaulting, arcs etc. The surface structure can be varied between roughly sprayed and ultra-smooth; the colours are available within the NCS-, or RAL-scale. Irrespective of the external conditions of the building, the Fellert Alpha Acoustic System allows adjustments to either completely harmonize with existing architecture, or, alternately create totally new architectural conditions.

Surface structures:

The Alpha is available in the following surface structures. Please observe that the photos are taken in ca 2X enlargement, and that they also have a slightly grey shade. In the original photos they are completely white.

Surface structure: Rough

Surface structure: Natural

Surface structure: Smooth

Certificate:

Click on the links below to download the documents in PDF-format.

- Emission, VOC
- Firecertificate (SWE)
- Firecertificate (ENG)
- ASTM E-84 Fellert Alpha
- ASTM E-84 Fellert Ultra

Can be dyed in optional colour!

ABC

Everything you always wanted to know about acoustics but were afraid to ask. ▶
